

PALASH BEHURA

BCA Student | Software & Data Projects

GitHub: github.com/palashbehura54-source • [KBP Energy Live Project](#)

PROFILE

BCA student at Chandigarh University with a previous academic background in data analysis and computer science. I **learn by building practical projects**: a business management portal for a real company, a C-based carbon-aware routing research platform, and spreadsheet-based financial tracking. Comfortable with programming fundamentals, databases, web development basics, and project-based problem solving.

EDUCATION

CHANDIGARH UNIVERSITY

Jul 2026 – Present

Bachelors in Computer Applications, Computer Science

UNIVERSITÀ DEGLI STUDI DI MESSINA

Sep 2023 – May 2026

Bachelor's in Data Analysis, Computer Science

SELECTED PROJECTS

KBP Energy — Business Management Web Portal | *Next.js, TypeScript/TSX, Tailwind CSS, Supabase/PostgreSQL, Git/GitHub*

Built and deployed a practical company website and private business portal covering **customers, projects, workers, attendance, materials, labour, expenses, salaries, invoices, payments, Excel exports, authentication, and CMS-managed public content**. [Live demo](#)

GreenNet-C — Carbon-Aware Routing Research Platform | *C11, routing algorithms, public datasets, data analysis*

- Developing a research platform that combines network topology, latency, weather, and carbon-intensity data to study carbon-aware path selection.
- Keeps data provenance explicit, separating measured, forecast, reanalysis, derived, and model-parameter inputs.

Business Invoice & Financial Tracker | *Excel, formulas, business data tracking*

- Built a practical tracker for invoice totals, received amounts, outstanding balances, and project-level financial summaries using IF, SUMIF, and SUMIFS.

TECHNICAL SKILLS

Programming

Python, C, SQL, TypeScript/TSX

Web

Next.js, React basics, Tailwind CSS, Vercel

Data & Office

Excel (IF, SUMIF, SUMIFS), Pandas, Google Colab

Database & Tools

Supabase, PostgreSQL basics, Git, GitHub

WHAT I CAN EXPLAIN

Programming fundamentals • SQL queries and joins • Excel formulas • basic web components and routing • database tables and relationships • Git/GitHub workflow • basic authentication and row-level security concepts
